Course content

Why Attend

Advanced financial accounting plays a critical role in ensuring that organisations produce accurate, transparent, and compliant financial statements while addressing increasingly complex business transactions. As companies expand their operations, enter new markets, restructure their activities, and engage in sophisticated financial arrangements, accounting professionals must apply sound technical judgment and maintain a thorough understanding of financial reporting requirements.

Beyond routine bookkeeping and financial statement preparation, advanced financial accounting involves the recognition, measurement, presentation, and disclosure of complex transactions, including business combinations, consolidated financial statements, financial instruments, leases, deferred taxation, impairment, provisions, and foreign currency transactions. These areas require professionals to interpret accounting standards, evaluate financial evidence, and understand the implications of accounting decisions for organisational performance and stakeholder confidence.

Course Methodology

- The programme combines instructor-led technical discussions, IFRS application exercises, financial statement case studies, numerical calculations, consolidation workshops, and practical financial reporting simulations.
- Participants work with illustrative financial statements, accounting transaction scenarios, subsidiary reporting information, and financial disclosure examples. Exercises focus on identifying applicable accounting requirements, preparing journal entries, calculating financial adjustments, evaluating accounting judgments, and presenting financial information accurately.
- The methodology emphasises the practical application of advanced financial accounting principles rather than theoretical memorisation, enabling participants to strengthen technical competence and professional judgment.

Course Objectives

- Apply advanced financial accounting principles to complex business transactions
- Interpret relevant IFRS requirements and evaluate their financial reporting implications
- Prepare accounting treatments for complex assets, liabilities, income, and expenses
- Account for business combinations and calculate goodwill

Course content

- Prepare consolidated financial statements and group accounting adjustments
- Evaluate accounting treatments for financial instruments and related risks

| Target Audience

- This course is suitable for:
- Senior accountants and chief accountants
- Financial controllers and finance managers
- Financial reporting and consolidation specialists

Course outline

Detailed course outline

Day-by-day outline for Advanced Financial Accounting.

Day 1 - Advanced Financial Reporting Principles and Complex Accounting Transactions

- 09:00-10:07 | Reviewing the IFRS Conceptual Framework and its application to recognition, measurement, presentation, and disclosure decisions
- 10:07-10:41 | Evaluating accounting policies, changes in accounting estimates, prior-period errors, and significant professional judgments under applicable reporting requirements
- 10:41-11:00 | Applying advanced revenue recognition principles to multiple performance obligations, variable consideration, contract modifications, and long-term arrangements
- 11:00-11:30 | Coffee break
- 11:30-11:45 | Applying advanced revenue recognition principles to multiple performance obligations, variable consideration, contract modifications, and long-term arrangements (continued)
- 11:45-12:19 | Accounting for property, plant and equipment, intangible assets, investment property, and subsequent measurement considerations
- 12:19-12:53 | Evaluating fair value measurement techniques, valuation inputs, and disclosure requirements for relevant assets and liabilities
- 12:53-14:00 | Practical workshop: Analysing complex accounting transactions and preparing appropriate recognition, measurement, journal entry, and disclosure treatments
