Why Attend

Climate change is increasing the frequency and severity of floods, heatwaves, droughts, storms and wildfires. These hazards damage facilities, disrupt supply chains, affect worker health and change customer demand, while investors and regulators increasingly expect organisations to understand and disclose their physical climate risks.

This Climate Adaptation and Resilience Planning training course helps organisations assess their exposure to physical climate risks and plan practical adaptation measures. Participants learn how to use climate scenarios and hazard data, assess site and supply chain vulnerability, prioritise adaptation options, integrate climate risk into continuity and investment planning and report climate resilience to stakeholders.

Course Methodology

• The course uses climate data examples, site case studies and adaptation planning tools. Participants assess climate hazards for sample sites, score vulnerability, evaluate adaptation options using multi-criteria analysis and develop an adaptation action plan. Extreme weather scenarios test response planning.

Course Objectives

• Explain the physical risks of climate change for organisations

• Interpret climate scenarios and hazard data for decision making

• Assess the vulnerability of sites, assets, people and supply chains

• Identify and prioritise adaptation options

• Integrate climate risk into continuity, risk and investment planning

• Plan emergency response for extreme weather events

Target Audience

• Business continuity and resilience professionals

• Sustainability and environmental managers

• Risk managers
