Course content

Why Attend

The oil and gas industry operates in a dynamic environment shaped by market volatility, technological advancements, regulatory changes, and evolving energy demands. This course provides participants with a comprehensive understanding of the industry's value chain, commercial drivers, project economics, risk management, and strategic decision-making, enabling them to contribute more effectively to upstream, midstream, and downstream operations.

Course Methodology

• The course combines instructor-led presentations, industry case studies, practical exercises, group discussions, project evaluation workshops, financial analysis activities, and real-world examples from the global oil and gas sector.

Course Objectives

- Understand the structure and commercial drivers of the oil and gas industry
- Explain upstream, midstream, and downstream operations and business models
- Evaluate oil and gas projects using financial and economic analysis techniques
- Understand contracting strategies and project development processes
- Apply project risk management principles within oil and gas projects
- Analyze project performance using industry-standard financial indicators

Target Audience

- Petroleum engineers
- Production and operations engineers
- Project engineers and project managers
- Finance and commercial professionals in oil and gas

Course outline

Detailed course outline

Day-by-day outline for Essential Skills for Oil and Gas Professionals.

Day 1 - The Oil and Gas Industry and Commercial Environment

- Understanding the structure and value chain of the global oil and gas industry
- Exploring upstream, midstream, and downstream operations and their interrelationships
- Reviewing exploration, field evaluation, production processes, and reserve estimation concepts
- Understanding industry business models, production economics, and operating cost structures
- Examining the commercial drivers that influence investment and operational decisions
- Identifying strategic opportunities and challenges affecting the global energy sector

Day 2 - Project Development and Commercial Arrangements

- Understanding contractual and fiscal arrangements used within the oil and gas industry
- Reviewing the roles of international and national oil companies in project development
- Exploring commercial models, investment structures, and risk-sharing mechanisms
- Understanding front-end project planning and development processes
- Identifying common project delivery challenges and mitigation approaches
- Developing effective project governance and project control frameworks

Course outline

Detailed course outline

Day-by-day outline for Essential Skills for Oil and Gas Professionals.

Day 3 - Project Economics and Financial Evaluation

- Evaluating investment opportunities using project economic principles
- Understanding cash flow analysis and the time value of money
- Applying financial performance indicators to support investment decisions
- Developing discounted cash flow models for project evaluation
- Understanding cost estimation methodologies and key cost drivers
- Applying earned value management techniques to monitor project performance and progress

Day 4 - Risk Management in Oil and Gas Projects

- Understanding the principles and objectives of project risk management
- Applying risk management processes throughout project lifecycles
- Identifying project objectives, uncertainties, and potential threats
- Assessing technical, commercial, operational, and environmental risks
- Developing and maintaining project risk registers and response strategies
- Identifying and engaging key stakeholders to support successful project delivery

Course outline

Detailed course outline

Day-by-day outline for Essential Skills for Oil and Gas Professionals.

Day 5 - Industry Trends, Strategic Challenges, and Capstone Case Study

- Examining the impact of unconventional energy developments on global markets
- Analyzing the influence of technological innovation on the oil and gas industry
- Understanding geopolitical factors affecting energy supply, demand, and pricing
- Evaluating strategic challenges facing energy companies in changing market conditions
- Participating in an integrated case study applying project economics, commercial analysis, and risk management principles
- Course review, lessons learned, and action planning for professional development
